NAME
       penny-reprint - read and reprint Penny ledger

SYNOPSIS
       penny-reprint [options] *FILE...*

DESCRIPTION
       Reads the Penny ledger(s) you specify and prints them to standard output, in a (hopefully) more tidy for-
       mat. All comments are retained, but blank lines and insignicant whitespace within the transactions (such as
       the amount of whitespace between multiple tags) are ignored. If no *FILE*, or *FILE* is -, read standard
       input.

OPTIONS
       --output FILENAME, *-o FILENAME*
               send output to *FILENAME* instead of standard output. You can use multiple *--output* options; to
               explicitly print to standard output, use *--output -*.

EXIT STATUS
       0 if everything went fine; another value if there were problems (such as inability to read a ledger file.)

BUGS
       Please report any bugs in the program or documentation to Omari Norman ⟨omari@smileystation.com⟩
